

Monarch MFASTZL Product Usage Recommendations

The MFASTZL is a zero-lift clip, designed to be used for applications where traditional Z-Clips can't be used. These clips allow for installation and removal with zero lift-off, which can be beneficial for areas that don't have clearance.

These zero-lift clips snap together, and have a removal force of 7-10kgF minimum, which is dependent on the panel weights. The recommended spacing for clips is a minimum of 12", and a maximum of 24." This has more to do with the engagement strength between clips, and less to do with the weight of the panels.

Each application of the MFASTZL should be designed and tested prior to installation. The design must include appropriate fasteners for each substrate, and loads should be referenced from the fastener manufacturer.

Fastener Considerations:

Hole Size: .200"/5.08mm.

Maximum Screw Head Diameter (Female): .5"/12.7mm

Maximum Screw Head Diameter (Male): .4375"/11.1mm

Maximum Screw Head Height (Total): .415"/ 10.5mm

Countersunk Screws are Not Compatible.

Please Refer to Page 2 for Critical Dimensions.

Substrate Considerations:

Both substrates should be capable of holding appropriate fasteners, and their required minimum engagement. Supporting walls should be plumb, flat, and shims should be kept to a minimum. Clips need to rest squarely on the wall, and on the panel.

Note: These are product recommendations, and are not to be solely used for engineering calculations or for prescriptive use.
